

Verisys Connect[®]

Verisys Connect is a real-time transaction engine that saves organizations time and money by performing a single search of multiple primary sources on a provider or entity, with a single inquiry. With its easy-to-use self-service platform, Verisys Connect performs a variety of searches and is a central repository to store collected data.

SIMPLE, EFFICIENT, AFFORDABLE

Verisys Connect allows you to perform a single search of multiple primary sources on a provider with a single inquiry. By entering your provider's name once, you can collect the requested data from numerous chosen primary sources (exclusions, debarments, sanctions, and disciplinary actions) into a single centralized location, creating a repository of these reports to look back on at the time of an audit, saving you time and money.

Verisys Connect is powered by FACIS[®] (Fraud Abuse Control Information System), the Gold Standard in data platforms and nationally used databases. Verisys owned and maintained, FACIS is a data platform consisting of primary source content from federal and state sources for exclusions, sanctions, debarments, and disciplinary actions against healthcare professionals and businesses for all published license types and published jurisdictions. FACIS is the most comprehensive data set for screening and monitoring healthcare providers to ensure compliance and protect against financial and reputational risk.

MULTIPLE SEARCHES

A FACIS search through Verisys Connect looks for results or potential matches from all federal data sources (OIG, SAM (including SDN), FDA, TRICARE, FBI, U.S. DOJ, U.S. Treasury Dept., U.S. State Dept.) and all state level Federal Healthcare Entitlement Program (FHEP) sources (State Medicaid Exclusions, State Contractor, Disqualification/Debarment Lists, HEAT Task Force News, State Attorney General News, Federal DA General News, Medicare/Medicaid Opt-Out Lists).

Verisys Connect searches individuals, providers, and entities and offers transactional searches for pre-employment as well as additional searches for the abuse registry, sex offender, OFAC+, SSA-Death Master File, professional license, and controlled substance license.

KEY DATA SOURCES SCREENED BY VERISYS CONNECT

- Exclusions
- Sanctions
- Debarments
- Disciplinary actions
- Professional Licensure
- Abuse Registry
- Sex Offender Registry
- OFAC+

VERISYS CONNECT BENEFITS

- Easy to use
- Protects your customers
- Mitigates risk of fines
- Regulatory compliance

VERISYS SERVICES

Verifications

Verisys will perform verifications on possible matches found during a search to determine true matches. Verisys employs a team of verification analysts who are specially trained to resolve false positives and to verify true matches with primary source data. A match category is assigned to each true match, depicting the status and severity of the action. Both clear and match results will be returned. All match results will include unaltered data from the primary source. PDF links to the primary source documentation are also provided on the delivered results.

Monitoring

Many organizations choose to monitor their populations monthly to keep their organization safe, secure, and compliant while meeting government standards and regulations. Other organizations choose to monitor their populations quarterly or yearly. When monitoring yearly, if you have a physician who gains a debarment or a sanction four months after you hired them, and you check your population 12 months after hire date, then you will be fined for the 8 months that that physician practiced with the debarment or sanction.

Verisys Connect can also monitor your population in near real-time with the ongoing monitoring frequency of your choice and is completely flexible given your needs. Once frequency is selected, this process is run on a continual basis against our database, which has access to more than 3,500 primary sources and over 5,000 total sources. The process is repeated depending on the frequency chosen and all new match results are delivered via API or dashboard. Providers and entities can easily be added or subtracted from the monitored population at any time.

Using the monitoring capability of Verisys Connect, clients can continually access the documents that were provided at the time of the initial inquiry when needed for reference or for an audit. Verisys Connect houses all of your records and provides a list of all searches performed in the past 90 days, allowing an account manager to access and supply the list to their customers.
